

Internet Checks

Accept Checks Online @ 50% of Credit Card Rates

Offer the ease and convenience of a credit card to your customers who do not have a credit card or are at their credit limit.

How Do Internet Checks Work?

Our Internet Gateway, is an information capture and processing service that allows consumers to pay for goods or services over the Internet by check without the need to mail a check.

The SpeedCHEX Virtual Terminal easily integrates into any E-Commerce application. When your application is ready to collect the check payment, you simply pass the user to the secure SpeedCHEX Virtual Terminal where they are presented with easy-to-understand input screen for entering their check payment information. The primary check input screen resembles a paper check so that users can easily understand how to find and enter their checking account information. When finished, the user will be passed back to the URL of their choice to finish the purchase process.

Unlike credit cards, electronic check transactions cannot be instantly verified and approved. This is due to the nature of the Federal Reserve and the fragmented structure of the current banking system.

ACCEPT CHECKS ON YOUR WEBSITE AND SAVE 50% VS. CREDIT CARDS

Current figures show that 20% of all online transactions are check-based and that more than 75 million Americans do not have a credit card.

Now your business can **accept online checks** and get fast verification of account status. You **don't even need a shopping cart** to process online checks with our Virtual Terminal!
